

GUARDIAN

3G network shutdown and what it means for Guardian

Dear valued customer,

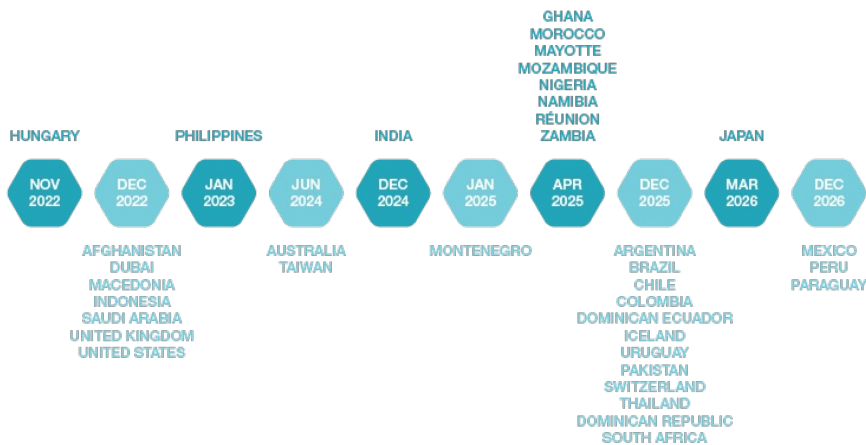

Please be advised all Guardian Gen 1 and Gen 2 systems will in time be unable to connect to 3G networks.

Why is this occurring?

Telecommunication companies are starting to phase out their 3G networks worldwide.

When will this take effect?

Most countries and regions will phase out 3G in the next few years. An indicative timeline of when local telecommunication providers are expected to stop supporting 3G networks is provided below.

Note: These dates are subject to change and new countries or regions may be added at any time. Seeing Machines recommend regularly monitoring local news sources for 3G network updates.

How do I stay connected to Guardian?

Seeing Machines suggest upgrading to the Guardian Gen 2.1 system to ensure the continued safety of your drivers. Due to scheduling availability of certified installers and the possibility of unpredictable network shutdowns in some regions, it is recommended users upgrade as soon as possible.

What does Guardian Gen 2.1 offer?

The Guardian Gen 2.1 system offers a number of additional benefits including an embedded 4G network/LTE capability and superior Driver Monitoring Engine (DME).
